Election/Restrictions

Consideration with respect to the newly submitted prior art and with respect to the newly submitted amendments to the claims are the basis of this restriction requirement. This application contains claims directed to the following patentably distinct species of the claimed invention:

Species I, Claims 87-89, methods of producing an optical element with electron beam (EB) energy amount control.

Species II, Claim 90, methods of producing an optical element with change of position of depth of focus.

Species III, Claim 92, methods of producing an optical element with forming a molding die.

Species IV, Claims 93 and 94, methods of producing an optical element with electroforming.

Species V, Claims 95-97, methods of producing an optical element with injection molding.

Species VI, Claims 99-102, methods of pattern drawing including irradiating an EB onto the pattern-drawn layer and controlling beam energy.

Species VII, Claims 103-120, methods of pattern drawing including irradiating an EB onto the pattern-drawn layer and changing a drawing position.

Species VIII, Claims 125-127, methods of pattern drawing including irradiating an EB onto the pattern-drawn layer and the pattern comprises a grating.

Art Unit: 1725

Species IX, Claims 128-143, methods of pattern drawing including irradiating an EB onto the pattern-drawn layer including reflection reducing structure.

Species X, Claims 144-149, methods of pattern drawing including irradiating an EB onto the pattern-drawn layer comprising a polarized structure.

Species XI, Claims 150-154, methods of pattern drawing including irradiating an EB onto the pattern-drawn layer comprising a birefringence phase structure.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the

Art Unit: 1725

case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

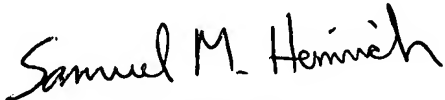

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Samuel M. Heinrich whose telephone number is 571-272-1175. The examiner can normally be reached on M-F.
